Name of Action or Project: Village of Ocean Beach Sewage Collection System		
Project Location (describe, and attach a general location map): Village of Ocean Beach, NY		
Brief Description of Proposed Action (include purpose or need): The Village of Ocean Beach proposes to replace its existing sanitary sewer collection system which was originally constructed in 1916 and includes nearly 20,000 linear feet of clay piping laid in a sandy bed. The clay pipe has deteriorated and failed in sections allowing groundwater, stormwater and tidal inputs to the sewage treatment plant. The scope of work includes the re-lining of an existing 12” dia. sewer and replacement of all of the gravity sewers running south to north with a low pressure sewer (LPS) line. Each property will be connected to a grinder pump unit as part of the LPS system. The scope of work also includes a new stormwater collection system to alleviate flooding within the Village downtown area along Bay View Walk. The stormwater collection system includes the installation of below grade modular wetland units, a series of interconnected sediment basins and manholes utilizing 12-inch to 18-inch diameter HDPE stormwater piping, and a below grade stormwater pump station with discharge to the Great South Bay.

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Project :

Date :

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency’s reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer “**Yes**” to a numbered question, please complete all the questions that follow in that section.
- If you answer “**No**” to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box “Moderate to large impact may occur.”
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the “whole action”.
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

Full Environmental Assessment Form
Part 3 - Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:

To complete this section:

- Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design element or project changes.
- Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- Attach additional sheets, as needed.

Impact Description:

Impact on Surface Water: The proposed action may involve construction within or adjoining a freshwater or tidal wetland, or in the bed or banks of any other water body (See EAF part 2, 3D.)

This project involves the replacement of the Village's existing sewage collection system due to age and deterioration of the pipes. According to flow data from the Village Sewage Treatment Plant, infiltration of groundwater into the sewage collection system is occurring. The existing collection system will be replaced with a watertight system. It is anticipated that flooding will continue to occur in localized areas within the Village where a stormwater collection system does not exist. As such, this project involves a hydrologic analysis followed by design and installation of a new stormwater collection system for the Village. It is anticipated that an outfall pipe will be installed conveying the stormwater into the Great South Bay. As stormwater already is eventually discharged into the Great South Bay through an existing outfall, the concern for impact involves the replacement of the outfall pipe in proximity to the Great South Bay. Specific actions will be taken to minimize the impact to this waterbody during construction of the outfall.

Mitigation Measures to be Incorporated into the Project:

The Contractor shall be required to prepare and implement an Environmental Protection Plan, documenting the contractor's means and methods of performing the work in conformity with all applicable laws and permits, taking into account, protection of the Great South Bay.

All work shall be performed in accordance with New York State Department of Environmental Conservation ("NYSDEC") Tidal Wetland permit to be obtained. Subsequent to permit issuance, the construction manager will monitor the work done by the Contractor to ensure consistent compliance.

All work shall be performed in accordance with New York State Department of Environmental Conservation ("NYSDEC") State Pollutant Discharge Elimination System ("SPDES") permit to be obtained. Subsequent to permit issuance, the construction manager will monitor the work done by the Contractor to ensure consistent compliance.

All work shall be performed in accordance with a Stormwater Pollution Prevention Plan ("SWPPP") that is compliant with Village and State requirements. The SWPPP will mandate certain Best Management Practices ("BMPs") and measures intended to prevent any project related sediment, hazardous chemicals, spills, erosion, or other pollutants from infiltrating into the ground or being discharged to surface waters.

In order to protect the Great South Bay, the project contract documents will provide for any applicable temporary or permanent run-off, erosion, and sediment controls including silt fences, erosion fabric, straw bale, turbidity curtain and vegetation.

Significance of Impact with Mitigation Measures:

Not significant.

Determination of Significance - Type 1 and Unlisted Actions

SEQR Status: Type 1 Unlisted

Identify portions of EAF completed for this Project: Part 1 Part 2 Part 3

Upon review of the information recorded on this EAF, as noted, plus this additional support information

and considering both the magnitude and importance of each identified potential impact, it is the conclusion of the
the Village of Ocean Beach _____ as lead agency that:

A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will, therefore, be no significant adverse impacts from the project as conditioned, and, therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.d).

C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.
